As a major component of the ongoing efforts of the G7 Science Academies, and with the support of a consortium of domestic and international partners, the RSC is organizing the G7 Research Summit on The Future of Digital Health on November 25.

The objective of the virtual summit is to gather domestic and international leaders to envision a future in which citizens feel increasingly inspired by and connected to the opportunities afforded by Digital Health. The summit gives life to the 2020 G7 Science Academies’ declaration entitled “The Centrality of Digital Health Collaboration to Health Progress”.

The programme will focus on global perspectives and trends, highlighting steps that policymakers, scholars, scientists, and citizens can take to realize the enormous potential of the Future of Digital Health.
